Air Water Process Measurements You Can Trust

JCT Analysentechnik

was formed in 1992 with the intention of providing engineered solutions to the gas sampling industries. Fast forward 32 years, **JCT** Group was formed with acquisitions and partnerships extending beyond gas sampling.

The new **JCT GROUP**

provides the same high quality and well-engineered products to broad range of industries. Our motto is simple: *"Provide solutions that people can trust"*. With this philosophy, the **JCT** Group now provides solutions to ensure safety for our air and water. With its new acquisitions, the Group provides Gas Sampling Systems, Liquid Sampling Systems, Air Monitoring Systems and Analytical Products that can measure across a broad range of industries.

Günter Zimmer

General Manager
since 1992

Philipp Zimmer

Vice President
since 2018

Kunal Kothari

Vice President
since 2021

Sample Gas Conditioning You Can Trust

For the last 30 years **JCT** has been providing reliable and trust-worthy Gas Sampling and Conditioning Components for your process and emissions markets. These products are designed using our detailed application knowledge along with our partners inputs. We have recently expanded our product portfolio for our Gas Sampling Systems and continue to produce these products at our expanded facility out of Austria.

HEATED SAMPLE LINES

Well-operating heated sample lines are mandatory to achieve precise measurement results. The family covers temperature controlled as well as self-regulated and cut-to-length on site lines. It provides reliable operating temperatures above sample gas dew point.

SAMPLE GAS COOLERS

The state of the art architecture of the JHEX-4 heat exchanger used in Sample Gas Coolers guarantees precise measurement results. Almost not measurable SO₂ and NO₂ loss combined with high capacity makes the **JCT** Coolers the best choice for your sample gas.

CONDENSATE ALARM

A reliable Condensate Alarm is critical to protect expensive analyzer equipment. The KW-1/2 offers reliable detection even for low conductivity condensate.

NO₂ TO NO CONVERTER

For an economical measurement of NO_x with NDIR analyzers the JNOX Family of NO₂ to NO Converters are a great solution. The very long life and high efficiency cartridge guarantee a convenient operation.

HEATED
SAMPLE PROBE
JES-301 FAMILY

HEATED SAMPLE PROBES

The JES Family Heated Sample Probes cover all needs. From economical to complex solutions for heavy duty use in harsh conditions. The modular system will guarantee the perfect Sampling System for your process.

HEATED SAMPLE LINE
JH3 SERIES

SAMPLE PUMP
JSP SERIES

SAMPLE GAS
COOLER

SAMPLE GAS PUMPS

A low maintenance and low vibration Sample Gas Pump is key for a well-working gas analyzer system.

CONDENSATE
DETECTOR
KW-2

ACCESSORIES AND SPECIAL NEEDS EQUIPMENT

In addition **JCT** Gas Sampling provides a huge range of other products to handle your sampling and conditioning challenges.

JF FILTERS

FILTERS

Additional filtration in the Sample Gas Conditioning System is important to protect analyzers. For example the JAF-1 water stop is a "last line of defense" for gas analyzers. In addition also fine dust and acid filters are recommended.

NO₂ CONVERTER

NextGen AQMS

Air Quality Monitoring You Can Trust

Starting with the acquisition of mlu-recordum, **JCT** developed a state of the art, innovative AQMS solution in the markets. Breaking away from the traditional AQMS, **JCT** once again delivered a well-engineered product that helps customers reduce their cost of ownership without sacrificing any features/functionality and still meet all the EPA guidelines.

- Installation within 30 minutes
- Up to 90 % less power consumption
- Integrated IoT system
- Airpointer App

Liquid Systems You Can Trust

Acquisition of Manvia, helped **JCT** to bring the same high quality and engineering in Liquid Sampling and Conditioning Systems. We specialize in standard and customized **Liquid Sampling Systems** and components which are built in our state of the art facility in Spain.

JCT
Liquid Sampling

Liquid Sampling

Liquid Systems You Can Trust

JCT Manual (Grab) Sampling Systems are designed to meet the user's specification and are therefore highly economical solutions. They maximise worker's safety, make operation as simple as possible and obtain a representative sample. There is no influence on the process and emissions to the environment are avoided.

SAMPLING SYSTEM

DEAD MAN SYSTEM with BLOCK SELECTOR VALVE

A component to let 2-way and 3-way manual valves, on safe position when the operator release the handle.

It is designed to be coupled to the sampler systems, so that, in case of confusion, forgetfulness, interruption of the operation for any reason, the sampler go to closed position and remains immediately isolate from process.

FIXED VOLUME SAMPLE CYLINDERS

Providing representative samples even in high pressure (e.g. steam, gas). Combined with the dead man system and block selector valve they are very simple to operate and provide maximum safety for the operator.

NEEDLE SYSTEM

A system to provide reliable samples and protect health and safety for the operator. The sealing of the bottle prevents gas or liquid leaks. The simple operation makes it easy for operators.

MANUAL SAMPLING PANEL

Manvia's state of the art manual sampling system has some unique advantages:

- maximizes worker's safety
- avoids emissions
- committed to environment
- obtains a representative sampling
- does not influences the development process
- makes the operation easier
- and makes low cost, since virtually no maintenance

JCT
Process Analytics

Process Analytics

Process Solutions You Can Trust

JCT Process Analytics division was formed with the intention of supporting our key partners with customized applications. Acquisition of Zelentech helped us to provide customized **WATER IN OIL**, BS&W measurements along with selected liquid applications as oil in water and colorimetric measurements.

WATER IN OIL

-  Solutions for all applications
-  Reliable measurement
-  High accuracy
-  Economical

BYPASS SYSTEM

ZT100 S series inline water in oil measurement designed for use in bypass systems.

HIGH PRESSURE

ZT100 F series watercutmeter / BS&W analyzer for online measurement in the main line. Also applicable for high pressure applications.

MULTIPLE

ZT100 I series water in oil monitor designed for multiple applications.

RETRACTABLE

ZT100 I series retractable for use directly in main line. Available as automatic retractable version and for manual operation.

STATIC MIXER

ZTMX static mixer to guarantee accurate and reliable measurement results. Because water and oil does not stay mixed.

Process Analytics

Process Analytics

Process Solutions You Can Trust

Our **GAS ANALYZERS** are covering process applications where standard technologies are not sufficient. Flame Ionisation Detectors (FID) for measurement of organic carbons in gas, SIL2 and ATEX approved InSitu tuneable laser as well as thermal conductivity for e.g. H₂

GAS ANALYZERS

FID ANALYZERS FOR GASES

Heated FID unit to measure VOC in stacks meeting US EPA requirements.

InSitu PROCESS LASER ANALYZERS

SIL2 and ATEX approved TDLAS for process measurement. Including NH₃ and more.

THERMAL CONDUCTIVITY ANALYZERS

Zone 2 suitable thermal conductivity analyzer for measuring H₂ impurity and measuring H₂ in electrolysis process. Suitable for low levels ranges in PPM levels.

Process Analytics

Process Solutions You Can Trust

With the same philosophy of other **JCT** group companies, the **JCT PA** provides unique gas and liquid solutions to fill the product gaps of our key partners. The **JCT Liquid Analyzers** are helping the industry to get reliable measurement results and control their process.

LIQUID ANALYZERS

HEAVY METALS ANALYZERS

Heavy metals analyzer measuring Arsenic, Cadmium, and other heavy metals using non toxic reagents and no sampling system

FID ANALYZERS FOR STEAM AND CONDENSATE

Designed with our proprietary stripping system, the FID analyzer is engineered for measure VOC/THC in water, steam and condensate.

LIQUID TRANSMITTERS

Our ATEX/IECEx approved universal liquid transmitter suitable for connecting multiple sensors and used mainly in refinery effluent plants and industrial waste water treatment plants.

LIQUID SENSORS

Smart sensor with digital capabilities and suitable to install in hazardous areas.
